Making More Pizza Fractions

Help! Chef Andre needs to get 15 pizzas ready for a big party. You can add the pepperoni pieces. The fraction shows how much of the pizza needs the pepperoni pieces. Draw small, round red dots for the pepperoni. Andre did the first pizza for you.

1. $\frac{1}{2}$ 	2. $\frac{3}{4}$ 	3. $\frac{2}{6}$ 
4. $\frac{1}{3}$ 	5. $\frac{6}{8}$ 	6. $\frac{2}{4}$

Pinta las partes que representa el numerador en cada caso. Escribe cómo se leen.

FRACCIONES

1. Escribe las siguientes fracciones:

Dos
quintos

Tres
octavos

Cuatro
medios

Cinco
sextos

Seis
tercios

Siete
décimos

Ocho
cuartos

Nueve
séptimos

Diez
quinceavos

Once
novenos

Cinco
doceavos

Ocho
tercios

Trece
medios

Quince
cuartos

Seis
sextos

Diez
quintos

Cuatro
sextos

Nueve
octavos

2. Colorea para representar las fracciones siguientes:

$$\frac{1}{3}$$

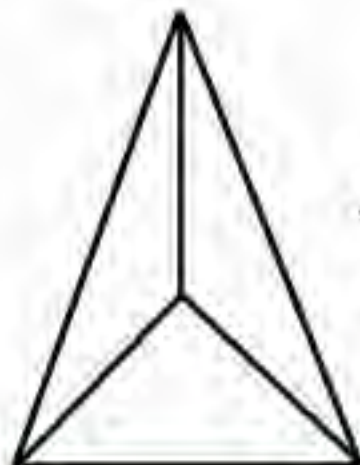

$$\frac{5}{8}$$

$$\frac{4}{6}$$

$$\frac{4}{4}$$

$$\frac{2}{3}$$

$$\frac{7}{12}$$

FRACCIONES EQUIVALENTES

1

$$\frac{3}{6} = \frac{1}{2}$$

Colorea todas las fracciones equivalentes a $\frac{1}{2}$ de NARANJA.
 Colorea todas las fracciones equivalentes a $\frac{1}{3}$ de AZUL.
 Colorea todas las fracciones equivalentes a $\frac{2}{3}$ de VERDE.
 Colorea todas las fracciones equivalentes a $\frac{3}{4}$ de MARRÓN.

Nombre: _____

Fecha: _____

SUMA DE FRACCIONES

INDICACIONES: Realiza las siguientes sumas de fracciones, dibujando y escribiendo el resultado de cada una de las operaciones. En la línea de la derecha escribe con letras cómo se lee la fracción de cada resultado.

$$\frac{1}{4} + \frac{2}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{8} + \frac{3}{8} = \frac{\quad}{\quad}$$

$$\frac{1}{8} + \frac{2}{8} = \frac{\quad}{\quad}$$

$$\frac{1}{4} + \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{3}{6} + \frac{1}{6} = \frac{\quad}{\quad}$$

$$\frac{1}{3} + \frac{1}{3} = \frac{\quad}{\quad}$$

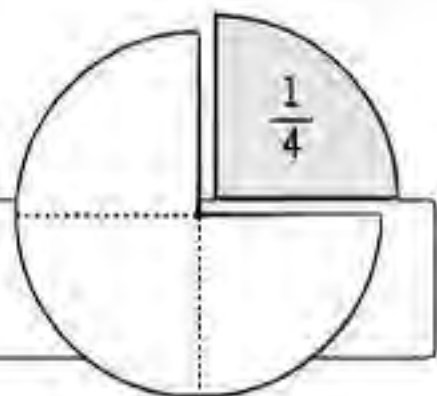

$$\frac{1}{4} + \frac{2}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{8} + \frac{3}{8} = \frac{\quad}{\quad}$$

FRACCIONES

Una fracción es un número, que se obtiene de dividir un entero en partes iguales. Por ejemplo cuando decimos una cuarta parte de la pizza, estamos dividiendo la pizza en cuatro partes y consideramos una de ellas, es decir un cuarto. $\frac{1}{4}$

La fracción está formada por dos términos: el numerador y el denominador. El numerador es el número que está sobre la raya fraccionaria y el denominador es el que está bajo la raya fraccionaria.

$\frac{3}{4}$ numerador: son las partes coloreadas
 $\frac{3}{4}$ denominador: partes en que se dividió el entero

Fracciones equivalentes

Las Fracciones Equivalentes tienen el mismo valor, aunque parezcan diferentes.

¿Por qué son lo mismo? Porque cuando multiplicas o divide a la vez arriba y abajo por el mismo número, la fracción mantiene su valor. La regla a recordar es:

¡Lo que haces a la parte de arriba de la fracción también lo tienes que hacer a la parte de abajo!

$$\frac{1}{2} \xrightarrow{\times 2} \frac{2}{4} \xrightarrow{\times 2} \frac{4}{8}$$

$$\frac{1}{2} \xrightarrow{\div 2} \frac{1}{4} \xrightarrow{\div 2} \frac{1}{8}$$

Si dividimos hasta que no podamos más, habremos simplificado la fracción (la hemos hecho la más simple posible). Observa el ejemplo:

$$\frac{18}{36} \xrightarrow{\div 3} \frac{6}{12} \xrightarrow{\div 3} \frac{2}{4} \xrightarrow{\div 2} \frac{1}{2}$$

Importante:

Las partes de arriba y abajo de la fracción siempre deben ser números enteros.

Las operaciones que podemos hacer son multiplicar y dividir (siempre las dos partes a la vez). Si sumamos o restamos un número arriba y abajo, no tendremos una fracción equivalente.

Con tu tabla de fracciones y regleta busca las fracciones equivalentes, escríbelas en tu cuaderno y realiza dibujos donde representes cada fracción. Puedes utilizar las formas que gustes.
